    - AT LEAST 20% INCREASE FROM CY13 IN TOTAL SHIPS RECEIVING BLUE H AWARD

LESSON LEARNED ON THE WATERFRONT

- Accidental CHT discharge believed to be caused by cleaning chemicals being dumped by berthing cleaners into VCHT system through drains, toilets, or sinks.
- Navy Divers working under the water about 20 feet from discharge.
- **IMPACT:** Diving operations stopped immediately. There were 4 divers from that team became ill within 72 hours. Another diver who used the effected diving equipment the following day also became ill. A few of the ill diver's family members became ill as well.
- Take Away:
  - Ensure shipboard personnel are trained on importance of proper disposal of cleaning chemicals.
  - Contact NEPMU5 to get further guidance and assessment of situation immediately
